#	Name	How to Demo	Notes
1	Show Start Menu	Start the app and see the start menu including start game and leaderboard	
2	Start Game	When pressing start game button on menu, see the boards displayed	
3	Pick fleet position	When having typed in the player names and the grid is showing, be able to press a box on the grid and have it place a ship	Boats of different sizes and shapes. Displays the boat and then you click the position and an arrow for direction. Make sure boat stays inside grid
4	Switch player	When the swap player button is pressed, the screen gets covered and a start turn button is shown. Once pressed it will start the other players turn	Big button on top to signify then end of a players turn
5	Send missile	After both players have set up their ships, be able to press an opponents tile to send a missile.	
6	Reveal tile	The tile clicked shows the contents. Blue for water, red for ship.	Reveals the tile and saves somewhere that that tile is displayed for future turns.
7	Boat destroyed message	When all the tiles of the boat are shot, the message box says “Hit and Sunk”	
8	Detect winner	When a player destroys all the opponents ships, it displays a win message	
9	Update win counter	The win counter of the player gets increased once a player wins. Cannot be seen but the leaderboard is updated.	Done in a file to keep the storage permanent. Assume the same 2 players always play.

10	Display leaderboard	Press leaderboard in the start menu. All players and their wins are shown..
